

matrox PowerSpace for Financial Professionals

Financial & Enterprise

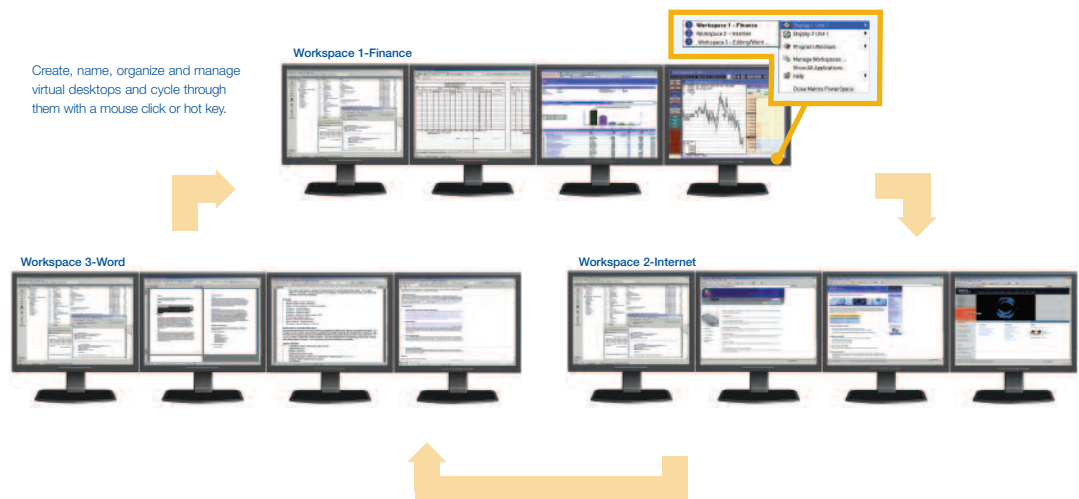

The easy-to-use Matrox PowerSpace interface allows the user to set up, customize and manage workspaces for maximum productivity.

Increase productivity and manage workspaces more efficiently

Matrox PowerSpace virtual desktop manager represents the pinnacle of multi-display functionality. With multi-display applications rapidly becoming the standard, end users depend on the increased productivity and efficiency that only a multi-display setup can provide. Matrox PowerSpace adds a whole new level of functionality to Matrox's powerful, reliable, and stable multi-display solutions. Matrox PowerSpace enables users to customize their Windows desktop workspace and alleviates the need to minimize, maximize and move application windows when working with numerous applications simultaneously. It allows users to create, name and organize up to 9 workspaces per user defined display unit to better manage screen space in a more efficient format. Once the Windows desktop workspaces have been defined, simply configure hotkeys to toggle between workspaces.

Created for both end users and IT administrators

With its array of unique features, Matrox PowerSpace offers tremendous benefits to end users and IT administrators alike. The "Desktop Recall" feature of PowerSpace enables users to save application positions per workspace, and then automatically repositions them. The "Autostart" function enables users to specify the applications they would like to have automatically started upon login and positions them to their saved location. The "Import/Export" feature enables system administrators to back-up user workspace data onto the network so workspaces can be imported and exported effortlessly. Also, the "RDP Awareness" feature retains the user's local (work) settings for a multi-monitor configuration even after a remote login session (RDP) from a single monitor has occurred.

Matrox PowerSpace Epica for thin computing

Designed for thin-computing environments, Matrox PowerSpace Epica virtual desktop management software provides all the features of Matrox PowerSpace. An innovative software suite designed to be installed on the server, PowerSpace Epica allows users to customize virtually hosted desktop workspaces to the way they work, in order to streamline work processes and enhance productivity with multi-display features previously only available to PC, laptop and workstation users. Matrox PowerSpace Epica software functions exclusively with the new Matrox Epica graphics cards and works in conjunction with Matrox's specialized window management software designed for thin computing: Matrox PowerDesk Epica.

Financial trading with Matrox PowerSpace

Matrox PowerSpace allows critical market data applications to be visible at all times while other workspaces are called up individually. A trader may choose to create three different workspaces: Finance, Internet and Editing/Word Processing. Matrox PowerSpace enables the trader to specify what applications to launch in each workspace. In the Finance workspace, Microsoft Excel® and other finance related applications can be set to launch. For the Internet workspace, Microsoft Internet Explorer® and Outlook® are called up. While Microsoft Word® and PowerPoint® can be set to launch in the Editing/Word Processing workspace. By customizing the desktop workspace, the financial trader can maximize productivity by streamlining the amount of information seen at once, and by eliminating time spent launching, minimizing, maximizing and positioning applications.

Feature	Benefit
Manage your desktop	<ul style="list-style-type: none"> • Create, name, organize and manage up to nine workspaces per monitor, or per multi-monitor workspace, that can be labeled and toggled with hotkeys.
Select workspaces	<ul style="list-style-type: none"> • Change between workspaces instantly by accessing the Matrox PowerSpace icon in your taskbar or by assigning Hot Key shortcuts. • Select an icon that best represents a workspace from the default icons or load your own EXE, DLL and ICO icons.
Show workspace name	<ul style="list-style-type: none"> • Select the position you want the workspace name to appear on your primary display. • The name of the workspace currently in use displays for 3 seconds.
Desktop Recall	<ul style="list-style-type: none"> • Set applications to open in a preferred desktop position and/or workspace. • Workspaces are saved and automatically restored with the applications in their appropriate positions. • Eliminate having to manually set each workspace once you begin working in PowerSpace or when you would like to revert back to a previously saved workspace.
Autostart program	<ul style="list-style-type: none"> • Launch applications upon login and automatically reposition them to their saved locations.
Import/Export workspaces	<ul style="list-style-type: none"> • Back-up user workspace data onto the network to Import/Export workspaces effortlessly.
RDP awareness	<ul style="list-style-type: none"> • Recognizes when a user is logging in remotely. • Retains the user's local multi-monitor settings even after a remote login session from a single monitor has occurred.
