Matrox safety information

To ensure safe and reliable operation of your Matrox product, to avoid personal injury, and to prevent damage to your computer or Matrox hardware, read the following guidelines.

Installation and operation

- Read and retain all instructions. Only use your Matrox product according to the instructions, operating ranges, and guidelines provided in the Matrox user guide and other related Matrox documentation. Failure to follow these instructions could result in damage to your product or injury to the user or installer.
- Don’t expose your Matrox product to rain, water, condensation, or moisture.
- Your Matrox product (card or unit) can become hot while operating. Always turn off your computer, unplug it, then wait for it to cool before touching any of the internal parts of your computer or installing your Matrox card. Allow hot surfaces to cool before touching your Matrox unit.
- Static electricity can severely damage electronic parts. Before touching any electronic parts, drain static electricity from your body (for example, by touching the metal frame of your computer).
- When handling a card, carefully hold it by its edges and avoid touching its circuitry.
- Don’t stack devices or place devices so close together that they’re subject to recirculated or preheated air.
- Don’t operate your system or Matrox product near a heat source or restrict airflow to your system, and make sure the ambient temperature doesn’t exceed the maximum recommended temperatures. Don’t block ventilation holes on your unit or system.

If a power supply (internal or external) was included with your product

- Don’t place the external power supply directly on top of the device.
- Only use power supplies originally supplied with the product or use a replacement that’s approved by Matrox. Don’t use the power supply if it appears to be defective or has a damaged chassis.
Don’t defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding-type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug doesn’t fit into your outlet, consult an electrician to replace the obsolete outlet.

Make sure that nothing rests on the power cables and that the cables aren’t located where they can be stepped on, pinched, or tripped over.

Don’t use damaged power cables.

Unplug your system or device during lightning storms or if unused for long periods of time.

If your product includes laser-based technology

- The device contains a Class 1 laser product for use only under the recommended operating conditions and guidelines. For more information, see your Matrox user guide.
- Invisible laser radiation may be emitted from disconnected fibers or connectors. Don’t stare into beams or view directly with optical instruments.
- Only use optical transceivers originally supplied with the product or use a replacement that’s approved by Matrox.
- For more information on laser support and compliance, see your Matrox user guide.

If your product includes a battery

- The battery is non replaceable.
- To dispose of your product, see www.matrox.com/environment/weee.

Repair

- Don’t attempt to open or repair a power supply unit (if one was supplied).
- Don’t attempt to open or repair your Matrox product.
- If there’s a fault with your Matrox product, review your Matrox warranty for more information.
Before you begin

To avoid personal injury and to prevent damage to your system or Matrox hardware, read the following guidelines before installing your Matrox hardware.

Using a validated platform

- For detailed information on how to install your Matrox Mura card in a validated systems, see the Matrox System Builder’s Guide ([www.matrox.com/mura/support](http://www.matrox.com/mura/support)).
- For information on validated systems, motherboards, and chassis models, contact your Matrox representative or see the Matrox web site ([www.matrox.com/graphics](http://www.matrox.com/graphics)).

Preventing damage to your hardware

When installing your hardware

- Always turn off your system, unplug it, then wait for it to cool before touching any of the internal parts of your system or installing your Matrox product.
- While your system is turned off but still plugged in, some electrical current is supplied to the motherboard. This current may prevent newly installed hardware from working properly.
- Static electricity can severely damage electronic parts. Before touching any electronic parts, drain static electricity from your body (for example, by touching the metal frame of your system).
- When handling a card, carefully hold it by its edges and avoid touching its circuitry.
- Always try to insert or remove your card as straight as possible.

When connecting your hardware

- Whenever you change your connection setup, make sure you’re using the correct connectors and that all connectors are properly fastened.
- Don’t change connections while your system is turned on. Before changing connections, make sure your system is shut down and turned off.
- Whenever you restart your system, make sure your monitors are already turned on. Otherwise, the software may not be able to properly detect your monitors.
- When connecting devices, make sure the connectors are properly fastened.
Getting started

Thank you for purchasing a Matrox Display Wall product. You can use Matrox Mura IPX Series, Mura MPX Series, and C-Series cards as standalone solutions, combined with each other, or with third-party* hardware to extend the capabilities of your Matrox-based display wall controller.

Hardware supplied†

Mura IPX Series –

- Mura IPX 12G-SDI Capture and IP Encode/Decode (MURAIPXI-E4SF • MURAIPXI-E4SHF) – Mura IXP Series card, 2 ribbon cables‡ (for framelock).
- Mura IPX 4K IP Decode and Display (MURAIPXO-D4LF • MURAIPXO-D4LHF) – Mura IPX Series card, 2 ribbon cables‡ (for framelock).
- Mura IPX 4K DisplayPort Capture and IP Decode (MURAIPXI-D2MF • MURAIPXI-D2MHF) – Mura IPX Series card, 2 ribbon cables‡ (for framelock).
- Mura IPX 4K HDMI Capture and IP Encode/Decode (MURAIPXI-E4JF • MURAIPXI-E4JHF) – Mura IPX Series card, 2 ribbon cables‡ (for framelock).
- Mura IPX 4K HDMI Capture and IP Decode (MURAIPXI-D4JF • MURAIPXI-D4JHF) – Mura IPX Series card, 2 ribbon cables‡ (for framelock).
- Mura IPX 4K DisplayPort Capture and IP Encode/Decode (MURAIPXI-E2MF • MURAIPXI-E2MHF) – Mura IPX Series card, 2 ribbon cables‡ (for framelock).

Matrox C-Series –

- C900 – C-Series graphics card.
- C680 – C-Series graphics card.

Mura MPX Series –

- Mura MPX-4/4 – Mura MPX Series card, 2 KX20 to quad-DVI cables, 8 DVI to HD-15 adapters, 2 ribbon cables (for framelock), washer.
- Mura MPX-4/2 – Mura MPX Series card, 1 KX20 to quad-DVI cable, 1 KX20 to dual-DVI cable, 6 DVI to HD-15 adapters, 2 ribbon cables (for framelock), washer.

* For more information on supported third-party graphics cards, see the release notes. For information on how to configure your system, see "Matrox System Builder’s Guide."
† The hardware supplied with your Matrox product may vary depending on the SKU or part number of your product. For more information, contact your Matrox representative.
‡ Matrox Mura IPX Series – The ribbon cables (for framelock) are currently unsupported.
- **Mura MPX-4/0** – Mura MPX Series card, 1 KX20 to quad-DVI cable, 4 DVI to HD-15 adapters, 2 ribbon cables (for framelock), washer.
- **Mura MPX-SDI** – Mura MPX Series card, 1 KX20 to dual-DVI cable, 2 DVI to HD-15 adapters, 2 DIN to BNC adapters, 2 ribbon cables (for framelock), washer.
- **Mura MPX-V16** – Mura MPX Series card, 2 DVI to BNC adapters, 1 ribbon cable (for framelock), washer.
- **Mura MPX-V8** – Mura MPX Series card, 1 DVI to BNC adapter, 1 ribbon cable (for framelock), washer.

---

**Optional hardware (sold separately)**

Depending on your connection setup, you may need additional hardware. For more information, see the “Connection setup” section for your Matrox product.

---

**Software supplied**

- Windows® driver package – Matrox provides a 64-bit version of the driver to use your Matrox display wall products.
- Linux® package – Matrox supports various distibutions for your Matrox display wall products. For more information, see the Readme file included with the Matrox package for Linux.
- SDKs and APIs – Matrox offers a range of software, API, and libraries to configure your display wall and to create your own custom interfaces and applications.

For more information on the software available for your Matrox product, see “Software overview”, page 51.

---

**More information**

We provide additional information in help and Readme files. Be sure to check for any last-minute release notes included with your product. Also, check the Matrox web site (www.matrox.com/graphics) for the latest Matrox software, technical support, and product information.

Setting up a display wall

The following outlines the steps for installing, connecting, and setting up your Matrox card.

Setup overview

Mura IPX Series display card

1. Install your Matrox cards – see page 24.
2. Connect your cards – see page 32.
3. Update the software on your cards – see page 54.
4. Configure your display wall. You can use the following:
   - Matrox Network API – see page 55.
   - MuraControl for Windows – see page 57.

Mura IPX Series capture cards

1. Install your Matrox cards – see page 24.
2. Connect your cards – see page 34.
3. Install your Matrox software – see page 53.
4. Configure your display wall. You can use the following:
   - Matrox Network API – see page 55.
   - Matrox PowerDesk – see page 55.
   - MuraControl for Windows – see page 57.

Using third-party graphics hardware* with Mura IPX Series capture cards

1. Install your Matrox cards – see page 24.
2. Connect your cards –
   - Third-party hardware. For more information, see the documentation for your graphics hardware.

* For more information on supported third-party graphics cards, see the release notes. For information on how to configure your system, see "Matrox System Builder's Guide."
• Mura IPX Series capture cards – see page 47.

3 Install the driver for your third-party hardware. For more information, see the documentation for your graphics hardware.

4 Install the Matrox software for your Mura IPX Series capture cards – see page 53.

5 Set up your multi-display layout. For more information, see the documentation for your graphics hardware.

6 Configure your display wall. You can use the following:
  • Matrox Network API – see page 55.
  • MuraControl for Windows – see page 57.

Mura MPX Series

1 Install your Matrox cards – see page 24.

2 Connect your cards – see page 38.

3 Install your Matrox software – see page 53.

4 Configure your display wall. You can use the following:
  • Matrox Network API – see page 55.
  • Matrox PowerDesk – see page 55.
  • MuraControl for Windows – see page 57.

C900 or C680

1 Install your Matrox cards – see page 24.

2 Connect your cards – see page 47.

3 Install your Matrox software – see page 53.

4 Configure your display wall. You can use the following:
  • Matrox Network API – see page 55.
  • Matrox PowerDesk – see page 55.
  • MuraControl for Windows – see page 57.
Planning your display wall

This section describes the steps to consider if you’re setting up a Mura-based display wall for the first time. We recommend you review these steps before setting up your display wall.

Planning the output layout of Mura MPX Series cards

Setting your card order

Mura MPX-4/4, MPX-4/2, MPX-4/0, and MPX-SDI – The DIP switches on your Mura MPX Series output cards are used to control the order in which the GPUs of your cards are used. Setting the DIP switches is useful if you’re setting up a large display wall layout that uses multiple cards. Ordering the output connectors enables PowerDesk software to properly lay out the outputs of your display wall and avoids you having to manually set up your multi-display layout.

For example, setting the first card to 0 means that card will be the first one used, and the first GPU of that card will be identified by PowerDesk as A.

To set the DIP switches on your cards, use the tip of a pen or pencil to flip the switch on or off. We recommend setting your card order as follows, starting with card 0.*

---

* The DIP switches use binary counting to set the card order.
Setting the order of your output connectors

Monitors are numbered consecutively based on which connector each is attached to. For example, on an Mura MPX Series output card using a quad-monitor cable, the monitor attached to the connector labeled 1 on the cable is identified as 1, the monitor attached to the connector labeled 2 on the cable is identified as 2, and so on.

To facilitate the setup of your multi-display layout, we recommend connecting your monitors consecutively and arranging your monitors in pairs.

Using PowerDesk to manage your multi-display layout

In a multi-card setup using Matrox Mura MPX Series cards, PowerDesk assigns letters to the GPU and numbers to the outputs associated with that GPU.

In the examples below, the order of the first card (4 outputs) is set as 0, so its GPUs are identified as A and B. The four monitors connected to the first card are then identified as A1, A2, B1, and B2, which correspond to the monitors attached to connectors labeled respectively 1, 2, 3, and 4 on your KX20 to quad-DVI cable.

Using a multi-display layout with an even number of columns

This multi-display layout shows a 6 × 4 display wall. In this case, monitors are paired and follow each other sequentially from left to right (for example, A1, A2, B1, B2, C1, C2, and so on).
Using a multi-display layout with an uneven number of columns

This multi-display layout shows a 5 × 5 display wall. In this case, monitors are paired but don’t follow each other sequentially from left to right. In this case, the GPUs associated with the last card (K1, K2, L1, L2, M1) are placed in the last column of the layout.

![Table of GPU and output assignments]

Depending on your installation and connection, you may need to manually rearrange the outputs of your multi-display layout in PowerDesk to match the physical layout of your display wall.

For more information on setting up multiple displays, see “Configuring your display wall layout”, page 55.

After planning your output layout, you’re ready to install your cards (see “Installing your Matrox cards”, page 24).

Planning the output layout of C-Series cards

Using PowerDesk to manage your multi-display layout

In a multi-card setup, PowerDesk assigns letters to the GPU and numbers to the outputs associated with that GPU. Each card is identified with a unique GPU. C900 cards have three (3) outputs (1, 2, or 3) using one or three connectors each. Output 1 uses connectors 1, 2, and 3. Output 2 uses connectors 4, 5, and 6. Output 3 uses connectors 7, 8, and 9. C680 cards have six (6) outputs with a single connector each.
For example, this multi-display layout shows a 5 × 3 display wall on a C-Series based controller with one (1) C900 card and one (1) C680 card. On C900, each output uses three (3) monitors left to right and each output is placed one over another to create the 3 × 3 section on the left of the display wall. On C680, each output uses a single monitor to fill in the 2 × 3 section on the right.

Planning the input of Mura MPX Series and Mura IPX Series capture cards

Mura MPX Series’ and Mura IPX Series capture cards have input connectors. These input connectors are numbered according to the following guidelines:

- Cards are ordered in groups based on their order on the PCI bus. These groups are:
  1. Mura MPX-4/4, MPX-4/2, and MPX-SDI.
     You can specify the order of the cards in this group through DIP switches.
  3. Mura IPX Series capture cards.
     You can specify the order of the cards in this group through DIP switches.
- Inputs are then ordered according to the order of the connectors on the card.

* Except Mura MPX-4/0.
Setting the DIP switches

Mura MPX Series* and Mura IPX Series capture cards – The DIP switches on your Mura MPX Series and Mura IPX Series capture cards are used to control the order of the cards in each group. Setting the DIP switches is useful if you’re setting up a large display wall layout that uses multiple cards. Ordering the input connectors enables you to properly identify the inputs of your display wall.

For example, setting the first Mura MPX Series card to 0 means that the input connectors on that card will be the first one used and the first input connector will be labeled Input 1.

To set the DIP switches on your cards, use the tip of a pen or pencil to flip the switch on or off. We recommend setting your card order as follows, starting with card 0.†

* Except Mura MPX-4/0.
† The DIP switches use binary counting to set the card order.
Installing your Matrox cards

This section describes how to install your Matrox card. If your Matrox card is already installed in your system, skip to the “Connection setup” section for the card you want to install. For information specific to your system, like how to remove its cover, see your system manual.

**Step-by-step installation**

1. **Open your system and remove your existing card**
   
   If a card isn’t already installed, skip to step 2.
   
   a. Using Programs and Features in the Windows Control Panel, remove any currently installed display drivers. Restart your system for the changes to take effect.
   
   After your system restarts, you may be prompted to install drivers for the new graphics hardware detected. Click **Cancel**.
   
   b. Turn off your system and all peripherals such as your monitor or printer.
   
   c. Open the system and remove your existing card (if any).

2. **Choose an expansion slot**

   Most systems have different types of expansion slots. Choose a PCI Express® (PCIe®) slot depending on the type of card you have. Your system manual should identify the location of each type of expansion slot in your system.
3 Insert your Matrox card

- Position your Matrox card over the expansion slot you’ve chosen.
- Push the card in firmly and evenly until it’s fully seated in the slot.
- Secure the bracket of your Matrox card to the frame of your system.

4 Secure the bracket of your Matrox card

Mura MPX Series only – To support the weight of your cable and to avoid damaging your Matrox card, you need to properly secure the bracket of your card to your system.

- To secure your bracket, slip the washer provided with your Matrox product over the connectors, then screw the washer onto the bracket of your Matrox card.
- Make sure the washer lies flat against the frame of your system.

Your Matrox card is now installed. If you’re installing more than one card, see “Installing multiple cards”, page 26. Before restarting your system, connect your monitors or devices (see the “Connection setup” section for the card you want to connect). After connecting, restart your system and install your Matrox software.

Note: If your system has multiple PCIe x16 slots, your choice of PCIe slot may affect your card or system performance. Some PCIe x16 slots support only 8 or 4 lanes. Make sure the PCIe slot you choose supports the proper number of lanes for your Mura card. For more information, see your computer manual or the Matrox System Builder’s Guide.
Installing multiple cards

Your chassis model may support the installation of multiple Matrox cards in your system. For information on validated platforms, contact your Matrox representative or see the Matrox web site (www.matrox.com/graphics).

WARNING: To avoid damaging your cards, always insert your card as straight as possible into the slot. Don’t rock the card from side to side. If you meet resistance, don’t force the card into the slot.

Interconnecting multiple cards (Framelock)

Mura MPX Series, C900, and C680 only – If you have multiple Mura MPX output cards or multiple C900 or C680 graphics cards installed in your system, you can synchronize the frame rate of all your outputs by interconnecting your cards with a ribbon cable.*

Mura MPX Series – Attach the ribbon cable to the connector labeled Out on one card to the connector labeled In on the next card. Depending on the length needed, use either the long or short ribbon cable included with your product. Repeat this for every card installed.

C900 and C680 – You can interconnect either two C900 graphics cards or two C680 graphics cards.

Attach the ribbon cable to the connector labeled GEN0 on one card and to the connector labeled GEN0 on the next graphics card.

* Matrox C900 and C680 – Ribbon cable sold separately.
**WARNING:** To make sure the cable is inserted properly, the cable edge marked with a red line should be closest to the bracket.
Description of LED indicators

Your Matrox Mura cards have LED indicators that show you the configuration status of your setup and help you troubleshoot your cards.

Mura IPX Series cards

Your Matrox Mura IPX Series cards have one LED indicator on their bracket.
The following describes the behavior of this LED indicator.

<table>
<thead>
<tr>
<th>LED Color</th>
<th>Behavior</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green (solid)</td>
<td>Card is active.</td>
</tr>
<tr>
<td>Green (slow blink)</td>
<td>Card is restarting.</td>
</tr>
<tr>
<td>Green (fast blink)</td>
<td>Factory reset in process.</td>
</tr>
<tr>
<td>Amber (solid)</td>
<td>Card is in maintenance mode.</td>
</tr>
<tr>
<td>Amber (slow blink)</td>
<td>Card is restarting and is in maintenance mode.</td>
</tr>
<tr>
<td>Amber (fast blink)</td>
<td>Card is updating the firmware.</td>
</tr>
<tr>
<td>Red (solid)</td>
<td>Card has detected a fatal error. Try restarting your system. If after restarting your system the LED indicator is still red, contact your vendor for technical support (see “Customer support”, page 94).</td>
</tr>
<tr>
<td>Red (slow blink)</td>
<td>Card has detected a misconnection. Try restarting your system. If after restarting your system the LED indicator is still red, contact your vendor for technical support (see “Customer support”, page 94).</td>
</tr>
<tr>
<td>Black (off)</td>
<td>No power. Make sure your card is properly installed. Also, make sure your system isn’t in power saving mode (see “Installing your Matrox cards”, page 24). For more information, contact your vendor (see “Customer support”, page 94).</td>
</tr>
</tbody>
</table>

**Network connector**

The network connectors on your Mura IPX Series cards use LED indicators to provide information on the network activity and presence. The following describes the different network connector LEDs.

<table>
<thead>
<tr>
<th>LED color</th>
<th>Network activity</th>
<th>Network presence</th>
</tr>
</thead>
<tbody>
<tr>
<td>No LED (black)</td>
<td>No data transfer in progress or no network detected.</td>
<td>No communication established.</td>
</tr>
<tr>
<td>Green (fast blink)</td>
<td>Data transfer in progress.</td>
<td>—</td>
</tr>
<tr>
<td>Orange</td>
<td>—</td>
<td>Network communication established.</td>
</tr>
</tbody>
</table>
Mura MPX-4/4, MPX-4/2, and MPX-4/0

Your Matrox Mura MPX Series cards have four LED indicators labeled (Good, 12V, Fail, CFG_Done).

The following describes the behavior of these LED indicators.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color</th>
<th>Behavior</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good</td>
<td>Green</td>
<td>Card is active.</td>
</tr>
<tr>
<td>12V</td>
<td>Green</td>
<td>Card is properly powered.</td>
</tr>
<tr>
<td>Fail</td>
<td>Red</td>
<td>Card may have insufficient power. Try restarting your system. If after</td>
</tr>
<tr>
<td></td>
<td></td>
<td>restarting your system the LED indicator is still red, contact your vendor</td>
</tr>
<tr>
<td></td>
<td></td>
<td>for technical support (see &quot;Customer support&quot;, page 94).</td>
</tr>
<tr>
<td>CFG_Done</td>
<td>Black (off)</td>
<td>Problem occurred while programming your card. For more information, contac</td>
</tr>
<tr>
<td></td>
<td></td>
<td>t your vendor (see &quot;Customer support&quot;, page 94).</td>
</tr>
</tbody>
</table>
Mura MPX-V16 and MPX-V8

Your Matrox Mura MPX-V16 card has three LED indicators labeled (Power Good, FP1 Done, FP2 Done) and your Mura MPX-V8 card has two LED indicators labeled (Power Good, FP2 Done).

![Diagram of LED indicators](image)

The following describes the behavior of these LED indicators.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color</th>
<th>Behavior</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power Good</td>
<td>Green</td>
<td>Card is properly powered.</td>
</tr>
<tr>
<td>FP1 Done or FP2 Done</td>
<td>Green</td>
<td>Card is active.</td>
</tr>
<tr>
<td>FP1 Done or FP2 Done</td>
<td>Black (off)</td>
<td>Problem occurred while programming your card. For more information, contact your vendor (see &quot;Customer support&quot;, page 94).</td>
</tr>
</tbody>
</table>

Mura MPX-SDI

Your Matrox Mura MPX-SDI card has one LED indicator labeled (CFG_Done).

![Diagram of CFG_Done indicator](image)

The following describes the behavior of these LED indicators.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color</th>
<th>Behavior</th>
</tr>
</thead>
<tbody>
<tr>
<td>CFG_Done</td>
<td>Green</td>
<td>Card is active.</td>
</tr>
<tr>
<td>CFG_Done</td>

</tr>
</tbody>
</table>
Connecting your Mura IPX Series display card

This section describes how to connect your Mura IPX Series 4K IP Decode and Display card.

**Note:** To make sure your cables are securely attached to your Matrox cards, use a cable retention bracket. To purchase a cable retention bracket, contact your Matrox representative. For more information, see "Appendix C – Matrox secure cable solution", page 87.

**MURAIPXO-D4LF and MURAIPXO-D4LHF**

**Note:** Audio output is supported only on the DisplayPort connector labeled 1 of your Mura IPX Series display card.

**Connection overview**

<td>If your monitor has a DVI connector, use a mini DisplayPort to DVI adapter (active*) to connect your monitor cable to the mini DisplayPort connector on your Matrox card. Connect the other end of the cable to your monitor.</td>
</tr>
</tbody>
</table>

* Only active adapters (sold separately) are supported. Passive adapters aren’t supported.
Validating the network discovery of your Mura IPX Series cards

Matrox Mura IPX Series cards are initially assigned their IP addresses through DHCP (Dynamic Host Control Protocol). After connecting your devices, we recommend verifying that all your devices are discovered by the network.

Under the Network section in the Windows File Explorer, make sure the Mura IPX Series cards and IP source devices connected to the network are listed.

If prompted to enable network discovery and file sharing on your network when validating network discovery, enable these two features by clicking the prompt at the top of your Windows Explorer window. These two features must be enabled for Windows to detect the Mura IPX Series cards on your subnet.

Multiple subnet support

Mura IPX Series in the same subnet can be detected through the UPnP (Universal Plug and Play) protocol. If you have cards in different subnets of your network, you need to validate network discovery in each subnet separately.

</thead>
</table>
| MuraControl for Windows | • Mura IPX Series  
                          | • Mura MPX Series  
                          | • C900, C680         |

For more information, see "Matrox MuraControl software", page 57.

### More information

We provide additional information in help and Readme files. Be sure to check for any last-minute release notes included with your product. Also, check the Matrox web site (www.matrox.com/graphics) for the latest Matrox software, technical support, and product information.
Installing your software

This section describes how to install your Matrox driver and software.

Obtaining a driver and additional software

- If your Matrox product was provided by the manufacturer of your system, check the website of that manufacturer for the latest driver. A driver provided by the manufacturer of your system is more likely to be tested with your system model.
- For additional SDKs and APIs, contact your Matrox representative.

Before you install

- You may need administrator rights to install or uninstall certain software, or to change certain settings. For more information, see Windows documentation.
- To avoid potential problems, we recommend you install the latest Service Pack and hot fixes for your version of Windows.

Installing your driver

Windows

Download and run the Matrox driver package, then follow the on-screen instructions.

Linux

Download and run the Matrox driver package for Linux, then follow the on-screen instructions. For more information on the supported Linux distributions, see the Readme file included with your package for Linux.

Installing your APIs

Run the MSI from your Matrox API package. For more information, see the documentation included with your Matrox API.
Updating your Mura IPX Series display card

Download the Mura IPX Updater software package. Run the appropriate updater and follow the on-screen instructions. The Matrox Network API is automatically installed. You can use the Matrox Network API or MuraControl for Windows to configure your Mura IPX Series display card.
Configuring your display wall layout

Using the Network API to manage your layout

Use the Matrox Network API to set up your outputs and configure the advanced features of your display wall layout.

For more information, see the documentation included with the Network API.

Using PowerDesk to set up your multi-display layout

Setting up your multi-display layout using PowerDesk software involves entering the number of columns and rows for your display wall layout and adjusting the settings for your outputs (such as rotation, resolution, color palette, and refresh rate).

Mura MPX Series

To set up a multi-display layout for your Mura MPX Series card:

1. Right-click your Windows desktop and select Launch Matrox PowerDesk. From the main interface of Matrox PowerDesk, click Multi-Display Setup.

2. Under Basic configurations, select Use stretched mode.

3. Enter the number of Columns and Rows for your multi-display setup, then click OK.

4. Preview your setup in the work area. If you're satisfied, click OK or Apply to apply your multi-display layout. Otherwise, click Cancel.

Depending on your installation and connection, you may need to manually rearrange the outputs of your multi-display layout in PowerDesk to match the physical layout of your display wall.

For more information on setting up multiple displays, see Matrox PowerDesk help.

C-Series

To set up a multi-display layout for your C900 or C680 card:

1. Right-click your Windows desktop and select Launch Matrox PowerDesk. From the main interface of Matrox PowerDesk, click Multi-Display Setup.

2. Select a multi-display mode:
   C900 – Click Set up 3x3 configuration.
C680 – Right-click a display, click Use stretched mode, then select the layout you want to use for your multi-display setup.

3 Preview your setup in the work area. If you’re satisfied, click OK or Apply to apply your multi-display layout. Otherwise, click Cancel.

Depending on your installation and connection, you may need to manually rearrange the outputs of your multi-display layout in PowerDesk to match the physical layout of your display wall.

For more information on setting up multiple displays, see Matrox PowerDesk help.
Matrox MuraControl software

Use Matrox MuraControl for Windows to manage your Matrox display wall. With MuraControl software, you can create, save, and edit layouts so your source content appears where and how you want it.

Supported Matrox hardware

Matrox MuraControl for Windows supports the following Matrox hardware:

- Matrox Mura IPX Series
- Matrox Mura MPX Series
- Matrox C-Series (C900 and C680 only)

Obtaining MuraControl software

More information

To run Matrox MuraControl for Windows, a USB dongle (hardware lock) is required.

A 21-day free trial of Matrox MuraControl for Windows is available for download. Following the expiry of the 21-day free trial, you must purchase a software license in the form of a USB dongle to continue using MuraControl for Windows software.

To purchase a software license, contact your Matrox representative.

For more information on MuraControl software, see the Matrox MuraControl user guide.
Troubleshooting

What to do if you have a problem

If you experience problems with your Matrox product:

- Make sure your Matrox card is properly installed, you’re using the correct connectors, and that all connectors are properly fastened.
- Make sure you have administrator rights on the system you want to use. For more information, see Windows documentation.
- Review the documentation provided with your Matrox product, including the information in this section and in your Matrox System Builder’s Guide (www.matrox.com/mura/support), to see if your problem is already addressed.
- For troubleshooting information on your Matrox C-Series product, see your Matrox C-Series user guide.

If your problem persists, contact Matrox. For more information, see “Customer support”, page 94.

Common problems and solutions

This section addresses specific problems to your Matrox product that could prevent you from using your system or graphics hardware.

Problem  Not all graphics cards in the computer are fully supported
(Software doesn’t work with a certain graphics card, or another graphics card doesn’t work at all)

Cause  If you have different models of graphics cards in your computer, your Matrox driver may not support all the graphics cards in your computer.

Solution  Disable or remove any graphics hardware not supported by the driver you want to use. If there’s graphics hardware built into the motherboard of your computer that’s not supported by your software, see your system manual for information on how to disable this graphics hardware.
Cause: Windows 10/7 – If the Windows method for driver installation was used (instead of running the setup program included with your Matrox driver), the driver may not be installed for all the graphics cards it supports.

Solution: Run the setup program included with the Matrox driver. The setup program automatically installs the driver for each Matrox graphics card it supports.

Problem: System performance is slow or degraded

Cause: Your system or cards may be overheating.

Solution: Make sure the operating temperature of your graphics chip is within a normal range:

2. From the main interface, click Help and Troubleshooting → Troubleshoot.
3. Check the peak temperature being reported.

Cause: You may be using a platform that hasn’t been validated by Matrox.

Solution: Use a validated platform. For information on supported systems, motherboards, and chassis models, contact your Matrox representative or see the Matrox web site (www.matrox.com/graphics).

Problem: Mura IPX Series card not discovered on the network

Cause: Your Matrox product may not be properly connected or may be on a different subnet.

Solution: Verify the connection and status LEDs on your Matrox product (see “Network connector”, page 29). Also, make sure your Matrox product is properly connected and that all connectors are properly fastened.

Cause: Your Matrox product may be on an external network or on a different subnet.

Solution: Make sure your Mura IPX Series card and the IP source are on the same subnet (see “Validating the network discovery of your Mura IPX Series cards”, page 50). For more information, contact your network administrator.

Cause: Windows Server 2016/2008 R2 only – The Windows SSDP Discovery service may be disabled on your system.

Solution: Make sure the SSDP Discovery service is enabled on your system.
**Cause**  Network discovery and file sharing may not be enabled on your system.

**Solution**  Enable network discovery and file sharing on your system.

**Cause**  The firewall for your display wall system or for your network may be enabled and may prevent communication with your Mura IPX Series cards.

**Solution**  Make sure your firewall is properly configured to allow the necessary communication between your Mura IPX Series cards and the various networked components. For more information, see "Appendix A – Firewall requirements".

</table>

* Minimum requirements.

Accessing your Windows Firewall settings

**Note:** You may need administrator rights to modify your Windows Firewall settings. For more information, see Windows documentation or contact your system administrator.

To access your Windows Firewall settings:

Windows 10/7 –

1. **Windows 10** – Click **Start → Settings → Network & Internet → Ethernet → Windows Firewall.**
   
   **Windows 7** – Click **Control Panel → Network and Internet * → Network and Sharing Center *. (* Depending on your configuration, these steps may be unnecessary.)

2. **Windows 10** – In the left panel, click **Advanced Settings.**
   
   **Windows 7** – In the left panel, click **Windows Firewall → Advanced Settings.**
Appendix B – Adding a console display

With a console display, you can run applications to manage the layout of the display wall locally without affecting the appearance of your display wall.

Matrox web

Our web site has product literature, press releases, technical material, a sales office list, trade show information, and other relevant material. Visit the Matrox Graphics Web site at www.matrox.com/graphics.

Technical support

Matrox values your business and offers professional support for your Matrox product. If you have a problem, we recommend you follow the procedure below for the quickest results.

1 Contact your integrator – This is usually the quickest and most effective method of technical assistance. Your integrator is familiar with your complete system. In the case of hardware warranty assistance, the product must be returned to the integrator, who will return it to Matrox.

2 If your Matrox product was provided by your computer manufacturer, contact this manufacturer. For contact information, see your computer documentation or contact the vendor.

3 Direct Matrox technical support – If you still can’t resolve a problem (and your Matrox product wasn’t provided by your computer manufacturer), you can get technical assistance by contacting Matrox technical support at dwcsupport@matrox.com.

Information we need

Please give a complete description of the problem, and include:

- Matrox product serial number, model number, revision number, and firmware version.
- For Matrox cards – driver type and version, and memory address at which the Matrox card is installed.
- Computer brand and model name.
- Monitor brand and model name.
- Operating system, version, and service pack.
- Brand and model of any other cards and devices installed on your system.
**Program specific problems**

If a problem appears with a specific program, please give us the following information:

- Display settings (color palette, display resolution, and so on) applied when the problem occurs.
- If possible, take note of the file and segment address that caused the problem.
- Detailed steps known to cause the bug, so we can reproduce it.

**Driver and software download**

From your integrator or manufacturer – If your product was purchased through an integrator or a manufacturer, contact them for the latest display driver, software, and system utilities as they’re familiar with your complete system. An integrator or a manufacturer may also have directives regarding software updates.

Directly from Matrox – A more recent display driver may support more features and may offer increased capabilities (such as higher display resolutions). Matrox makes the latest display drivers, software, and system utilities available on the Matrox Technical Support Web site (www.matrox.com/graphics/en/support/drivers).

**View your warranty information**

Matrox makes warranty information available on the Matrox site (http://www.matrox.com/graphics/en/support/warranty/).

**View the third party software notices**

Matrox makes third party software notices and/or additional terms and conditions available on the Matrox site (https://thirdpartylicenses.matrox.com).

**Register your Matrox product**

Please register online (www.matrox.com/graphics/en/registration) to receive new product announcements and information on special offers and upcoming events.
Hot surface  Allow hot surfaces to cool before touching your Matrox unit.

Surface chaude  Laissez refroidir les surfaces chaudes avant de toucher votre appareil Matrox.

Battery replacement  The battery is non replaceable. To dispose of your product, see www.matrox.com/environment/weee.

Remplacement des piles  La pile n’est pas remplaçable. Pour se défaire du produit, voir www.matrox.com/environment/weee.

**FCC Compliance Statement**

**Remark for the Matrox hardware products supported by this guide**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment causes harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: Reorient or relocate the receiving antenna; Increase the separation between the equipment and receiver; Connect the equipment into an outlet on a circuit different from that to which the receiver is connected; Consult the dealer or an experienced radio/TV technician for help.

**WARNING**  Changes or modifications to this unit not expressly approved by the party responsible for the compliance could void the user's authority to operate this equipment.

---

**Declaration of conformity of a Class B digital device according to the FCC rules**

**We, the Responsible Party**  Matrox, 2002 Ridge Road, Champlain, NY 12919  Telephone: (514) 822-6000 (extension 2026)  Attention: Conformity Group Matrox

**Declaration**  The Matrox hardware products supported by this guide comply with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) these devices may not cause harmful interference, and (2) these devices must accept any interference received, including interference that may cause undesired operation. Any question regarding this declaration should be forwarded to the above coordinates.

---

**CANADA**

**Remark for the Matrox hardware products supported by this guide**

These digital devices do not exceed the Class B limits for radio noise emission from digital devices set out in the Radio Interference Regulation of Industry Canada.

**Remarque sur les produits matériels Matrox couverts par ce guide**

Ces appareils numériques n’émettent aucun bruit radioélectrique dépassant les limites applicables aux appareils numériques de Classe B prescrites dans le Règlement sur le brouillage radioélectrique édicté par Industrie Canada.

---

**FCC Compliance Statement**

**Remark for the Matrox hardware products supported by this guide**

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
WARNING  Changes or modifications to this unit not expressly approved by the party responsible for the compliance could void the user's authority to operate this equipment. The use of shielded cables for connection of the monitor to the card is required to meet FCC requirements.

EUROPE

(English) European user's information – Information on Conformity
Remark for the Matrox hardware products supported by this guide These devices comply with EC Directive 2014/30/EU for a Class B digital device. They have been tested and found to comply with EN55032/CISPR32 and EN55024/CISPR24. In a domestic environment these products may cause radio interference in which case the user may be required to take adequate measures. These products have been tested in a typical class B compliant host system. It is assumed that these products will also achieve compliance in any class B compliant system.

(Français) Informations aux utilisateurs Européens – Informations sur la conformité
Remarque sur les produits matériels Matrox couverts par ce guide Ces unités sont conformes à la directive communautaire 2014/30/EU pour les unités numériques de classe B. Les tests effectués ont prouvé qu'elles sont conformes aux normes EN55032/CISPR32 et EN55024/CISPR24. En un environnement résidentiel peut causer des interférences radio, dans ce cas l'utilisateur peut être amené à prendre les mesures appropriées. Ces produits ont été testés dans un système hôte typique compatible classe B. On suppose qu'ils présenteront la même compatibilité dans tout système compatible classe B.

(Deutsch) Information für europäische Anwender – Konformitäts-Informationen

(Italiano) Informazioni per gli utenti europei – Informazioni sulla conformità
Nota per i prodotti hardware Matrox supportati da questa guida Questi dispositivi sono conformi alla direttiva CEE 2014/30/EU relativamente ai dispositivi digitali di Classe B. Sono stati provati e sono risultati conformi alle norme EN55032/CISPR32 e EN55024/CISPR24. In un ambiente domestico, questi prodotti possono causare interferenze radio, nel qual caso all’utente potrebbe venire richiesto di prendere le misure adatte. Questi prodotti sono stati provati in un tipico sistema host conforme alla classe B. Inoltre, si dà per scontato che questi prodotti acquisiranno la conformità in qualsiasi sistema conforme alla classe B.

(Español) Información para usuarios europeos – Información sobre la conformidad
Observación referente a los productos de hardware de Matrox apoyados por este manual Estos dispositivos cumplen con la directiva de la CE 2014/30/EU para dispositivos digitales de Clase B. Dichos dispositivos han sido sometidos a prueba y se ha comprobado que cumplen con las normas EN55032/CISPR32 y EN55024/CISPR24. En entornos residenciales, estos productos pueden causar interferencias en las comunicaciones por radio; en tal caso el usuario deberá adoptar las medidas adecuadas. Se supone que estos productos cumplirán también con las normas en cualquier sistema que responda a los requisitos de la clase B.

FRANCE

Avertissement sur l’épilepsie
À lire avant toute utilisation d’un jeu vidéo par vous-même ou votre enfant  Certaines personnes sont susceptibles de faire des crises d’épilepsie ou d’avoir des pertes de conscience à la vue de certains types de lumières clignotantes ou d’éléments fréquents dans notre environnement quotidien. Ces personnes s’exposent à des crises lorsqu’elles regardent certaines images télévisées ou qu’elles jouent à certains jeux vidéo. Ces phénomènes peuvent apparaître alors même que le sujet n’a pas d’antécédent médical ou n’a jamais été confronté à une crise d’épilepsie.
Si vous-même ou un membre de votre famille avez déjà présenté des symptômes liés à l’épilepsie (crise ou perte de conscience) en présence de stimulations lumineuses, veuillez consulter votre médecin avant toute utilisation.
Nous conseillons aux parents d’être attentifs à leurs enfants lorsqu’ils jouent avec des jeux vidéo. Si vous-même ou votre enfant présentez un des symptômes suivants: vertige, trouble de la vision, contraction des yeux ou des muscles, perte de conscience, trouble de l’orientation, mouvement involontaire ou convulsion, veuillez immédiatement cesser de jouer et consultez un médecin.
Précautions à prendre dans tous les cas pour l’utilisation d’un jeu vidéo  Ne vous tenez pas trop près de l’écran.
• Jouez à bonne distance de l’écran de TV et aussi loin que le permet le cordon de raccordement. • Utilisez de préférence les jeux de vidéo sur un écran de petite taille. • Évitez de jouer si vous êtes fatigué ou si vous manquez de sommeil. • Assurez-vous que vous jouez dans une pièce bien éclairée. • En cours d’utilisation, faites des pauses de dix à quinze minutes toutes les heures.
The information in this guide is subject to change at any time and without notice.

Matrox Graphics Inc. reserves the right to make changes in specifications at any time and without notice. The information provided by this document is believed to be accurate and reliable at the time it is written.
