Matrox 4Sight EV6

Fanless industrial imaging computer

Machine vision for the factory floor
Matrox® 4Sight EV6 is an industrial computer built for machine vision on the factory floor. Part of a long and solid history, the Matrox 4Sight EV6 is an evolution of its immediate predecessor, integrating a seventh-generation quad-core Intel® Core™ processor for ever more demanding multi-camera applications.

A fanless design with multiple ports for GigE Vision® and USB3 Vision® cameras make the Matrox 4Sight EV6 right at home in any production facility, keeping an eye on a single line or many lines. The Matrox 4Sight EV6 is backed by a vendor with a proven track record, delivering optimized machine vision hardware and a software toolkit with a 25-year history of reliable performance.

Multiple ports with power for cameras
Matrox 4Sight EV6 is equipped with four Gigabit Ethernet and four SuperSpeed USB ports for connecting to the full range of available GigE Vision and USB3 Vision cameras. The Gigabit Ethernet ports support power-over-Ethernet (PoE) to further simplify cabling and thus reduce costs when opting for suitable GigE Vision cameras. Powered by a mobile-class embedded processor, Matrox 4Sight EV6 has what it takes to cost-effectively handle typical multi-camera inspections.

Factory and enterprise connectivity
Matrox 4Sight EV6 provides the necessary connectivity for interfacing to other industrial equipment and communicating with enterprise systems. RS-232/RS-485 ports support connections to legacy automation devices, while two additional Gigabit Ethernet ports provide independent connections to industrial and enterprise networks. These networking ports include a hardware-assisted mechanism for PROFINET® communication. This mechanism ensures timely response when the automation controller is set up for a short cycle-time or when the processor is too busy performing other tasks.
**Industrial-strength design and longevity**
The fanless design of the Matrox 4Sight EV6 reduces physical maintenance, eliminating the need to clean or replace an air filter or a worn-out fan. A small, rugged footprint casing and wide ambient operational temperature range allows the Matrox 4Sight EV6 to be mounted either horizontally or vertically in hostile, space-limited locations. Moreover, careful component selections secure the long term availability of the Matrox 4Sight EV6.

**Real-time discrete I/Os**
Discrete I/O management is achieved through a dedicated hardware-assisted mechanism on the Matrox 4Sight EV6. The mechanism enables output events to occur at precise moments in time, based on elapsed time, or for specific input events. An input event can come directly from a discrete input—including from a rotary encoder—or be count-derived from a discrete input. Programmed output events are stored in a hardware list, which is traversed based on a clock or an input event. The carrying out of an output event results in a state transition, pulse, or pulse train on a specific discrete output. Multiple cascaddable hardware timers are available to count or generate specific events. The Matrox 4Sight EV6 has what it takes to effectively synchronize a typical vision application with a manufacturing line.

**Software Environment**

**Microsoft Windows 10 IoT Enterprise**
Matrox 4Sight EV6 comes with Microsoft Windows 10 IoT Enterprise 2019 (64-bit), which provides the familiarity, performance, and reliability of Windows 10, including the Unified Write Filter (UWF) to prevent corruptions caused by unanticipated power-downs.

**Field-proven application development software**
Matrox 4Sight EV6 is supported by Matrox Imaging Library (MIL)$^{1,2}$ software—a comprehensive software development kit (SDK) with a 25-year history of reliable performance. This toolkit features interactive software and programming functions for image capture, processing, analysis, annotation, display, and archiving operations, with the accuracy and robustness needed to tackle the most demanding machine vision applications. Refer to the MIL datasheet for more information.

Assured Quality & Longevity
We adhere to industry best practices in all hardware manufacturing and software development; product designs pay careful attention to component selection to secure consistent long-term availability. Matrox Imaging is able to meet Copy Exact and Revision Change Control procurement requirements in particular circumstances, backed by our dedicated team of QA specialists.

Trusted Industry Standards
Matrox Imaging champions industry standards in our design and production. We leverage these standards to deliver quality compatible products, protecting our customers' best interests by ensuring our hardware and software components work with as many third-party products as possible.

Comprehensive Customer Support
Our devoted front-line support and applications teams are on call to offer timely product installation, usage, and integration assistance. Matrox Professional Services delivers deep technical assistance to help customers develop their particular applications in a timely fashion. Services include personalized training and device interfacing as well as application feasibility, prototyping, troubleshooting, and debugging.

Tailored Customer Training
Matrox Vision Academy comprises online and on-premises training for our vision software tools. On-premises intensive training courses are regularly held at Matrox headquarters, and can also be customized for onsite delivery. Vision Academy online training platform hosts a comprehensive set of on-demand videos available when and where needed.

Long-Standing Global Network
Matrox Imaging customers benefit from a global network of distributors who offer complementary products and support, and integrators who build customized vision systems. These relationships are built on years of mutual trust and span the globe, ensuring customer access to only the best assistance in the industry.

**About Matrox Imaging**

Founded in 1976, Matrox is a privately held company based in Montreal, Canada. Imaging, Graphics, and Video divisions provide leading component-level solutions, leveraging the others’ expertise and industry relations to provide innovative, timely products.

Matrox Imaging is an established and trusted supplier to top OEMs and integrators involved in machine vision, image analysis, and medical imaging industries. The components consist of smart cameras, vision controllers, I/O cards, and frame grabbers, all designed to provide optimum price-performance within a common software environment.
